

CAL #176

CAL #176 is a heavy-duty soak cleaner designed expressly for cleaning of steel, iron and all ferrous metals.

CAL #176 removes grease and oils temporarily holding them in emulsion. The emulsion breaks, creating an oil float that can be skimmed off. This gives longer life to the cleaner.

USEAGE: 10 oz./gallon at 170° F - 205° F
 Note: Continuous skimming is very desirable

This may be used as an electro-cleaner in your barrel plating operation. As an electro-cleaner: 10 oz/gal at 170° F to 205° F.
