

CAL 181

CAL 181 is a heavy-duty soaker tank cleaner designed expressly for the cleaning of steel, iron, brass, magnesium and all ferrous metals, prior to plating.

CAL 181 not only removes grease and oils but has a built in chelating power that helps remove iron oxides, thus giving your pickling acids longer solution life. CAL 181 resists the formation of metallic soaps and has a high chrome tolerance; these qualities add up and give you an excellent soaker cleaner with extra long solution life.

USEAGE

CAL 181 is recommended to be used from 6 to 10 ounces per gallon of water at 180° to 205° F.

CAL 181 has also been found superior when used in tumble deburring of steel parts.
