

CAL 301

- CAL 301** - Is a powdered burnishing and tumbling compound, for use with all types of barrel finishing media, including abrasive chips, balls and steel shapes.
- CAL 301** - Is one of the few all-purpose burnishing and tumbling compounds for use on most metals. Primarily, this material is compounded for bright burnishing and smooth finishing of bras, bronze, copper and gold parts to secure smooth, bright finishes with light color and high luster. This material has also been found to be outstanding for use in deburring of steel.
- CAL 301** - Is a free flowing powder, containing a neutral detergent, to saponify and emulsify oils, soften water, inhibit oxidation and promote lightness in color, while keeping media clean and free of oxides.
- CAL 301** - Is normally used at a concentration of 2-4 ounces per gallon.
