

Cal B

CAL B: is a special hot tank material in which the alkalinity has been carefully controlled. It does not contain borax or other harmful materials which will attack aluminum or other non-ferrous metals.

CAL B: is completely soluble, free rinsing and non-irritating.

Directions: material should be used at a concentration of 6 to 8 oz/gal. maintained at a temperature of 160° to 180° F for best results.

Note: On a new charge, add a piece of scrap aluminum to the tank.
