

DESCALER

Description:

An inhibited, concentrated liquid acid formula designed to effectively remove mineral salt scale from steam cleaner and pressure washer coils. Cal-Pac DESCALER is also effective as a rust remover.

Directions for use:

Concentrated DESCALER is diluted with three to four parts water in the initial de-scaling of black iron coils. More concentrated doses may be added to coils after initial de-scaling has begun. In de-scaling steam cleaner or pressure washers, DESCALER may be circulated through the coils, employing whenever possible, the pump on the equipment. Acid is circulated through coils until de-scaling has been completed.

For commercial dishwashing equipment, a one to four dilution of the DESCALER is added directly onto the machine until no scale is visible. If grease is present in machine prior to de-scaling, run dishwasher compound through the machine, then commence de-scaling process.

For special de-scaling operations consult Cal-Pac representative.

Safety Data:

DESCALER is a concentrated acid and should be handled with care. Protective clothing, goggles and gloves should be worn.

CONSULT A PHYSICIAN in case of exposure to skin, eyes or oral ingestion.
