

M - STRIP

Cal-Pac Chemicals Co. Inc. is pleased to announce an alternative to the methylene chloride based paint strippers. We at Cal-Pac are doing our best to listen to our customers, and you asked for a new type less/non-regulated paint stripper.

M-Strip just might be the answer to your stripping needs as well as relieving some of those nagging regulatory problems.

M-Strip is a liquid solution, which comes with a built in oil type seal to avoid smoking or reaction to other atmospheric conditions. Use **M-Strip** as is at a temperature not to exceed 160° F. Stripping can take as little as a few minutes for clear lacquer to an hour or so for the hardest to remove paints.

A material data safety sheet as always is available for your convenience. Please refer to your Cal-Pac representative for further information.
